

TS6211 DT

Digital terrestrial receiver

This digital terrestrial receiver gives you access to every free TV and radio channel of the digital terrestrial television (and it is compatible with the European VHF frequencies)

Its minimal black style and small dimensions allow you to easily place it among your electronic devices.

It's really simple to use because of the LCN feature (Logical Channel Number), which automatically arranges the channels' numbers.

Additionally, another feature makes it still more easy to use for those who are not so tech inclined: the Protection System, for enabling the remote control to only switch channels or adjust the volume. These features make it the ideal choice for the reception of the digital terrestrial television.
