

TWINY 1.2

Wireless Audio/Video receiver/transmitter

Product codes

TWINY 1.2: 23500046

The TELE System Audio/Video receiver and transmitter is now available in a brand new design. The TWINY1.2 enables transmitting any kind of audio/video signal from all devices connected to your main TV to a second television. Only a few minutes are necessary to place the kit containing three devices (1 receiver and 2 transmitters) and start receiving the audio/video signals of your video player, satellite or terrestrial receiver, dvd player or stereo system through a wireless connection on other two televisions. The 2.4 GHz transmitting frequency ensures a high audio/video quality and the possibility to receive the signal up to 100 meter (without obstacles). Twiny 1.2 is also a remote control extender to operate most audio/video devices directly from a second television.

TECHNICAL SPECIFICATIONS

Kit with one receiver and two transmitters

Remote control extension operating through 433,92 MHz radio frequency

FM band

4 different A/V transmitting channels

High quality transmission of the A/V signal

User friendly installation

No extra cables needed
