## Multifeed brackets

Multifeed LNB brackets extend the reception capacity of standard fixed system. Two or more LNBs can be fitted to the system for simultaneous reception from two or more satellites. In the case of the MF4 symmetrical model, the orientation of the two LNBs is fixed on 6° distance; in the MF1, MF2 and MF3 asymmetrical models, the LNBs can be positioned as required. The MF3 version allows fixing of two or more LNBs by means of a longer aluminium support.
